
Trade Alert - (WPM) – BUY

BUY the Wheaton Precious Metals (WPM) *November* 2025 $85-$90 in-the-money vertical Bull Call debit spread at $4.50 or best

Opening Trade

11-10-2025

expiration date: November 21, 2025

Portfolio weighting: 10%

Number of Contracts = 25 contracts

The bull market in precious metals is not dead; it's just resting. The demand for safe assets is greater than ever now that stocks, crypto, foreign currencies, and bonds have suffered serious, if not catastrophic, corrections.

Precious metals are also a falling interest rate play, and precious metals held up nicely while rates have recently shot up. With a succession of rate cuts on the horizon, the next move in interest rates has to be down. This is great for precious metals plays.

Wheaton Precious Metals' earnings are up 107% YOY, thanks to the hyperbolic move in the price of gold. It gets 58% of its current income from gold and 39% from Silver.

This particular option play is especially attractive with a very high 40% implied volatility. My own Mad Hedge Market Timing Index is all a seven-month low and in **"Strong Buy"** territory.

Stock players buy the (WPM) shares, which probably have a double in them over the next two years.

I am therefore buying the **Wheaton Precious Metals (WPM) *November* 2025 $85-$90 in-the-money vertical Bull Call debit spread at $4.50 or best.**

Don't pay more than $4.70 or you'll be chasing.

DO NOT USE MARKET ORDERS UNDER ANY CIRCUMSTANCES.

Simply enter your limit order, wait five minutes, and if you don't get done, cancel your order and increase your bid by 5 cents with a second order.

If you don't want to sit in front of a computer screen all day or live in a foreign time zone when the US stock market is closed, such as Australia, or don't want to sit in front of a screen all day, simply enter a spread of **Good-Until-Cancelled** orders overnight, like $4.50, $4.55, $4.60, $4.65, and $4.70. You should get done on some or all of these.

Wheaton Precious Metals Corp. is a multinational precious metals dividend streaming company, also known as a royalty trust. It indirectly produces over 26 million ounces a year via short-term options and contracts with mining companies all over the world, including Mexico, Portugal, the US, Chile, and Peru. It is, in effect, the best leveraged play on silver out there.

To learn more about the operation of Wheaton Precious Metals Corp, please visit their site by clicking here at https://www.wheatonpm.com/Home/

Silver is a great industrial play, and if you believe in the global economic recovery, you want to be loading the boat.

It is used in electronics and solar panels, which are about to get a big boost from the new president. Every Tesla requires 20 pounds of silver, which is holding production at 1.8 million units a year.

And yes, it is still used for jewelry, which gets bought more during economic recoveries.

Silver tends to lag gold, which has already started to move. When it plays catch-up, it rises twice as fast as gold.

This is a bet that the Wheaton Precious Metals (WPM) will not fall below $90 by the November 21 option expiration day in 9 trading days.

Here are the specific trades you need to execute this position:

Buy 25 November 2025 (WPM) $85 calls at……………..……$14.50
Sell short 25 November 2025 (WPM) $90 calls at..………..$10.00
Net Cost:……………………..………………..……………......$4.50

Potential Profit: $5.00 - $4.50 = $0.50

(25 X 100 X $0.50) = $1,250 or 11.11% in 9 trading days.

To see how to enter this trade in your online platform, please look at the order ticket below, which I pulled off of ***Interactive Brokers***.

If you are uncertain on how to execute an options spread, please watch my training video on ***"How to Execute a Vertical Bull Call Debit Spread"*** by clicking here at

https://www.madhedgefundtrader.com/ltt-vbcs/

The best execution can be had by placing your bid for the entire spread in the middle market and waiting for the market to come to you. The difference between the bid and the offer on these deep in-the-money spread trades can be enormous.

Don't execute the legs individually or you will end up losing much of your profit. Spread pricing can be very volatile on expiration months farther out.

Keep in mind that these are ballpark prices at best. After the alerts go out, prices can be all over the map.
